Crafty Post

Crafty Post

Award WINNER 2017
Category Bike Components
Company Leechi Enterprise Co., Ltd.

[GO TO PORTRAIT >](#)

Its adjustable height provides comfort under various riding conditions for mountain, city and E-bike. The identification system with built-in lighting and a personal design plate provides both safety and uniqueness features. A patented push mechanism is a key function to provide two adjustment speeds for improving rider safety. The modular gas spring provides an easy solution for riders to replace the old ones, ensuring constant performance of your personal post.

Outstanding in the following evaluation criteria

- Functionality
- Design

Jury Statement

This fully integrated saddle support system with light and number plate is an intelligent way of increasing the options for adjusting seat height. The Crafty Post thus offers genuine added value.

V-POINT SEAT POST

Promax V-Point Seatpost

Award WINNER 2015
Category Bike Components
Company Leechi Enterprise Co., Ltd.

[GO TO PORTRAIT >](#)

The Promax V-Point Seatpost was inspired by the company's award-winning Click V-Point brake levers, which feature the patented V-Point mounting system that allows the user to put the same lever on the right or left side of the bars. Using this mounting system as a starting point, the designers and engineers at Promax developed a first-of-its-kind seatpost with independent fore-and-aft and seat-angle adjustability, as well as a patented, super-simple rail clamping system that requires only one Allen key to operate and never has to be disassembled or removed from the post to mount a saddle. Mounting a saddle to the post is a simple process, involving one Allen key and one set of hands.

Outstanding in the following evaluation criteria

- Degree of innovation
- Functionality

Jury Statement

Many bikers have long wished for a solution that allows easy assembly of the saddle. The clever design of this saddle attachment responds to this very wish. A by-product of this design is that the tilt of the saddle is comparatively easy to adjust.
